

Greetings:

1. I am very concerned that BPL will cause unnecessary interference to radio users of spectrum below 54 MHz.
2. Not only could interference occur to Amateur Radio Operators such as myself but could occur on items such as Standard AM Broadcast radios. Wireless Intercom Carrier Current devices would be saturated.
3. I comment with considerable experience in carrier current devices both as a design engineer and hobbyist. Radiation from the Power Line is virtually guaranteed as the AC line is unbalanced most of the time. Anything connected to the AC line would be useless as they have no rejection capability.
4. I urge The Commission to consider BPL very carefully before a new problem child is born.

Thank you for your consideration.
